

OviGrowTM XL

FOR STIMULATION OF
EGG PRODUCTION
for
HIGHER & LONGER PEAKS

A highly specialized blend for optimum production in
Poultry Breeders, Commercial Layers and Emu Birds

OviGrow is a phyto-mineral complex and is recommended to

- Optimize egg production in commercial layers and breeders
- Improve the egg quality
- Improve egg production, fertility & hatchability in breeders, and
- Improve the livability of breeder chicks

OviGrow consists of:

- Chromium
- Yeast complex
- Important chelated minerals, and
- Immunomodulators

Major benefits of OviGrow are as follows:

- Can increase egg production up to or more than 3%*
- Has decreased the average feed intake by 2 g / bird per day*
- Has reduced the average mortality from 1.60 birds per to 0.64 birds per day*
- Has reduced the egg shell breakage from 6 eggs per day to 2 eggs per day*
- Has improved the egg yolk color and albumen contents in the treated flocks*

* As per the field trial conducted on a batch of 10000 birds of 36 weeks of age
by Dr. P. Ravi Kumar, Ganavaram, A. Pradesh state.
The mixing levels of OviGrow XL was 500 g / ton of feed for a period of 30 days.

OviGrowTM XL

OviGrowTM XL

FOR CREATING REVOLUTION
in
POULTRY PRODUCTION

OviGrow XL helps to

- Increase and optimize egg production in layers and breeders
- Improve the reproduction cycle by stimulating the ovaries and enhancing ovulation.
- Improve the quality of egg by increasing the albumen content and egg yolk color
- Improves the egg shell quality
- The immunomodulators in OviGrow help to improve the immune response of the flock
- Reduces the production stress
- Improve the hatchability and fertility in the breeder flocks
- Maintain production peaks for a longer period.
- Improves the digestion and absorption of feed nutrients

Chromium in OviGrow XL helps to improve the insulin function and enables the release of gonadotropins which improve the follicle development maturation of ovum and ovulation.

Yeast complex in OviGrow XL helps to prevent stress and enables the production to improve.

Chelated minerals complex (containing) Zinc & Selenium helps to improve the fertility, immunity and improves the egg shell quality and the albumen contents. These also prevent bone deformation and improve growth, prevents yolk mottling and improves the immunity of the birds.

The immunomodulators in OviGrow XL decrease the cholesterol levels in the birds and helps in the better digestion of the feed by better gut secretion. Improvement in overall gut health and FCR is also improved by feeding OviGrow XL on regular basis, thereby reducing the medicinal costs on the farm.

Recommended Mixing Level in Poultry Feed are:

Commercial Layers:

- 17th week till 25th week - 500 gm / Ton of Feed
- 26th week till 38th week - 400 gm / Ton of Feed
- 39th week onwards - 350 gm to 500 gm/Ton of Feed

Poultry Breeders:

During the entire laying period of the breeders: 750 gms to 1 Kg per Ton of Poultry Feed or as advised by a registered veterinary practitioner.
