

Cash Drawers

Whether it is combined with a simple cash register or an intelligent POS terminal, the cash drawer is one of the most important POS peripherals. It has to be able to accommodate cash, checks, credit card slips, receipts and the likes, securely and in sufficient quantities. National, international and industry requirements, as well as the various designs and functionalities of the individual POS units also have to be taken into account.

Wincor Nixdorf's cash drawers are well-established products of high quality, which have been used successfully for many years around the globe. A high level of security, combined with sturdy design and the adaptability of coin and note compartments to a variety of note sizes and coin quantities are characteristic features of these cash drawers.

Wincor Nixdorf's product range comprises three models which differ in terms of ergonomics, space requirement, capacity and functionality.

The KA12AP, KA14 and KA17 are base cash drawers. The drawers of these models open to the front, providing access to the coin and note compartments, and are mounted on high quality telescopic rails. Each cash drawer contains an inset tray which can be removed from the housing in its entirety. These models also come with a lockable lid.

The KA16 has a pop-up lid which opens to the top. This drawer is attached to a special mounting plate, but can be unlocked from the

mounting plate and electronics, and removed in its entirety.

Most of the cash drawer models provide at least 8 compartments for coins and 4 for notes, with at least 1 special compartment available for checks and credit card slips. The width of the note compartments can be adjusted to accommodate different sizes of note (for a variety of currencies).

The cash inset trays can be removed. A multi-level key combination concept (from 1 to max. 30 key combinations, depending on model) complies with international security regulations.

The cash drawers can be connected to BEETLE POS systems or to a POS printer with cash drawer interface, and are controlled by the system software.

Cash Drawers
