Your partner for aluminum fabrication & construction

Our history

Founded in 1994, MCO has evolved into a leading aluminum fabrication & construction business services provider. Our more than 15 years of continuous growth is a testament to the confidence our customers place in us and to the commitment of our members. It is also a testament to the sustaining principles in which we were founded upon, including our dream and shared values. The result for our customers: We are everywhere you need us to be and have the stability, discipline and dedicated professionals needed to deliver results.

Our Delivery Approach

MCO's customer-proximity business model organizes our operations around metro markets, allowing us to be deeply rooted within our customers' business communities. MCO's global delivery model offers customers the value of remote delivery through onshore, near shore and offshore expertise. Together, these models combine to offer customers the local accountability they desire at the value they need. These models are supported by a strong foundation of quality management

Our Industry

Aluminum provides a very beneficial material for fabrication. Silvery-white in appearance, aluminum is one of the most recycled metals in the world. In its natural form, aluminum is soft and pliable, but aluminum alloys formed with copper, zinc, magnesium, manganese, or silicon can be very durable. Aluminum is used industrially for its low weight, resistance to corrosion, and ability to withstand very cold temperatures. While other metals become brittle when exposed to extreme cold, aluminum actually becomes stronger. Aluminum is also non-toxic, non-magnetic, and a good conductor of electricity.

MCO use such operations as stamping, cutting, bending, forming, laser cutting, and welding to form products. We have an understanding of metal structures, are able to read and interpret engineering drawings, and can fabricate shapes using geometric development techniques. Other products manufactured by aluminum fabricators include enclosures, frames, brackets, panels, grills, cabinets, etc.

With dedicated experienced professionals, MCO is providing services to their customers based in West Bengal, Orissa, Assam, Bihar, Andhra Pradesh.

Your partner for aluminum fabrication & construction

Note: Beside our core work, also we do provide our services from small to large maintenance/ repair work for home or Flats.
