

NEELKANTH MACHINERY COMPANY

Manufacturers & Exporters of : PAPER CORRUGATED BOARD & BOX MAKING MACHINES

SHEET PRESSING MACHINE

We are proud to present **Sheet Pressing Machine** as part of our product range.

This machine is utilized for evenly setting of the corrugated sheets processed on the pasting machine. The wet glued sheets are piled over the lower plate.

An optimum pressure is applied by lowering the upper moving plate when switched on. After keeping the pile pressed for sometimes between the lower and the upper plates the sheets are set straight. Thus ensuring removal of air bubbles & producing an even board without damaging the flutes. Then the upper plate is moved up by reversing the switch, and the pile is removed. Thereby the sheets are set straight and even.

The machine is made solid in sturdy construction. The compression all over the surface is uniform. A reversible switch is fitted for moving the upper plate upside down.

Features:

- Pressures on the sheets are regulated by spring action
- The lower plate is fixed and upper moves up and down by reversible switch.
- Electric Motor of 3 Phase A/C 1440RPM / 440V ISI marked certified by ISO 9001:2000.
- All moving parts are protected by safety guards.
- The machine is robust in design and fabricated body of steel angles, strong in construction and easy to move up and down.

Size (in inch)	Sheet Size Fed Min/Max(in inch)	Power (H.P)
65"	15/65	1.5
75"	15/75	2.0
85"	15/85	2.0
95"	15/95	3.0
105"	15/105	5.0
