DuPont™ Ti-Pure® R-706 Titanium Dioxide

Grade Description

Product Description
DuPont™ Ti-Pure® R-706 is a multipurpose rutile titanium dioxide pigment, manufactured by the chloride process, that is designed to deliver both high gloss and excellent durability in coatings. This outstanding combination of end-use performance properties makes it a versatile pigment in solvent and waterborne systems for architectural, industrial, and automotive applications. The properties of R-706 are compared to other Ti-Pure® grades in Table 1.

Key Features
• High gloss
• Super durability
• Excellent dispersibility
• Easy wet-in
• Good hiding
• Blue undertone

Grade Consolidation
Because of this outstanding combination of performance properties, Ti-Pure® R-706 offers the opportunity for reducing the number of grades that must be stocked, cutting inventory and capital requirements.

High Gloss
Careful control of the TiO₂ particle size during manufacture of R-706 results in exceptional gloss performance. R-706 has a tight particle size distribution, resulting in less oversized particles that detract from gloss.

Super Durability
Unique encapsulation of the TiO₂ particle by a continuous coating of silica (SiO₂) is responsible for the excellent durability of R-706. Preliminary Florida exposure data for R-706 shows excellent gloss retention and chalk resistance in our standard alkyd exposure formula. Further exposure testing in more durable systems is in progress.

Excellent Dispersibility
The alumina (Al₂O₃) surface treatment reduces the contact between TiO₂ particles, resulting in excellent dispersion of R-706 in solventborne systems. To further enhance alkyd dispersion, we apply an organic treatment during manufacture. Likewise, the silica (SiO₂) surface treatment on the R-706 enhances the waterborne dispersion.

Easy Wet-in
Novel precipitation of the silica and alumina surface treatments result in the low oil absorption properties of R-706 that are responsible for its excellent wet-in. Less power required for R-706 wet-in could result in productivity gains and capacity increases.

Good Hiding
The low surface treatment levels, 3% amorphous silica and 2.5% alumina, result in a high TiO₂ content for R-706, contributing to good hiding. The mean particle size of R-706 approaches the optimum particle size for scattering efficiency.

Blue Undertone
Small particle size TiO₂ grades scatter blue light more effectively than larger particle size grades and hence have a bluer undertone. The bluer undertone of R-706 imparts a brighter, cleaner tint.

Safety Precautions
• Titanium dioxide is classified as a nuisance dust. Follow all local regulations and DuPont recommendations for exposure limits as described in the Material Safety Data Sheet (MSDS). If the recommended exposure limits of TiO₂ are to be exceeded, NIOSH-approved air-purifying respirators with particulate filters should be used.
• As a matter of good industrial hygiene, gloves and safety glasses with side shields or better eye protection should be worn when handling TiO₂. For more details, refer to the MSDS.

First Aid
• If large amounts of TiO₂ are inhaled, remove victim to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Call a physician.
• In case of eye contact, immediately flush with water for at least 15 min. Call a physician. In case of skin contact, the compound is not likely to be hazardous, but cleaning the skin after use is advised.

Shipping Containers
Ti-Pure® R-706 is available in 50-lb and 25-kg paper bags and semi-bulk containers (½ and 1 metric ton). Truckload shipments of the dry product are available directly from DuPont. Less-than-truckload volumes are available through one of the authorized DuPont distributors. Call your local sales office for the distributor nearest you.

Water slurries are available in some regions in truckload shipments (15 metric ton) and railcar (67 metric ton).

Product Storage
The shelf life of DuPont™ Ti-Pure® TiO₂ is indefinite as long as the material is kept from direct contact with moisture.
